DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In regards to the abstract, the hard returns between the three paragraphs have been deleted and the abstract has been formatted to one paragraph, in order to comply with 37 CFR 1.72.

The amended abstract appears below:

The present invention relates to a spectrometer whereby the accuracy of wavelength measurement can be improved without being affected by the environment of use. The present invention is characterized by improvements made to a spectrometer for spectrally dividing the light under measurement by transmitting the components thereof at different, wavelength-by-wavelength angles, and receiving and detecting the light under measurement thus spectrally divided by the chromatic dispersion device using an optical detector. The apparatus according to the present invention comprises a refractive index compensation means for compensating changes in the angle at which the chromatic dispersion device transmits the light under measurement, according to changes in the refractive index of the medium in which the chromatic dispersion device is placed.

Response to Arguments

Applicant's arguments, see the amendment, pages 6-7, filed September 30th, 2004, with respect to the rejection of claim 6, have been fully considered and are persuasive. The rejections of claims 6-7 and 14 have been withdrawn.
